

For Immediate Release

IE Discovery Enhances Integration of AutoReview™ within InfoDox™ Discovery Management Platform

New features allow users to save time and money while providing well-documented and defensible automated review capabilities

Austin, Texas (September 8, 2008)—IE Discovery, a leading provider of Comprehensive Discovery Management solutions to the legal community, announced today that it has upgraded its InfoDox platform with enhanced integration of its AutoReview automated review tools. This upgrade provides direct visibility into collections and immediate feedback, allowing clients to make fully informed decisions regarding scope, planning and budget.

With the upgrade users can now:

- Preview automated review results immediately – *before* agreeing to scope with opposing counsel.
- Automatically track and document AutoReview processes and results for more defensible reviews.
- Incorporate AutoReview results into manual review workflows, prioritizing review queues, highlighting automated review results, and tracking the effectiveness of AutoReview criteria.
- Identify documents most relevant to the claims at issue.

IE Discovery has implemented this update in order to limit the time and expense of document review. “We understand that document review can be the most time-consuming and expensive part of litigation and we strive for our Comprehensive Discovery Management platform to enable the speediest review possible.” said Chris May, CEO of IE Discovery.

This update to InfoDox is second major update in 2008. On May 5, the company released an update designed to improve the ability of attorneys to verify accuracy of duplicate and near-duplicate technology and ensure consistency of the review work product.
